# LAMINAM SINTERED QUARTZ

PIU Design door finished  
with Laminam sintered quartz  
[www.piudesign.pl](http://www.piudesign.pl)

## AN ULTRA MODERN FINISHING MATERIAL

### LAMINAM SINTERED QUARTZ

It's an ultra modern finishing material, which is a composition of natural materials, in particular of quartz, shale clay, granite rocks and ceramic pigments. First, the granules from the above raw materials are compressed. Subsequently, an innovative technology of granules sintering is used, in which the granules are sintered at the temperature of 1,220 degrees. This method produces the large-format Laminam slabs, which are ultra thin and perfectly flat.

### DESIGN

Not only have sintered quartz very good characteristics of performance, but also the modern design, corresponding to the expectations of the most demanding interior designers and private clients. The designers of the Laminam company are watching the global trends in the interior design, and introduce new collections to the offer every year. Currently, the portfolio of the Laminam brand has approx. 150 designs imitating natural stone, wood, metal, and even coal. The slabs present the drawing of specific materials as well as their texture.

# UNLIMITED POSSIBILITIES OF APPLICATIONS

---

## INSPIRATIONS

Due to their aesthetic and commercial properties, the Laminam sintered quartz have become the desirable and valuable material for designers. This resulted in a very wide range of products from the "home & decor" area, which main component are the Laminam plates. The sintered quartz slabs can be used both inside and outside the building. They are very often used for the construction of façades. They may be used in the interiors as the finish for floors, walls and furniture. The Laminam plates are very often used to construct the kitchen and bathroom countertops as well as window sills. But there are much more things that can be made of them. You will find more examples of products made with the use of the Laminam sintered quartz in this catalogue.

MODULTOP

material:  
Cava Bianco /  
Naturali Statuario  
Venato
